# City of Millen 2024 Water Quality Report

Georgia Water System ID Number: GA1650000

## Water System Contact (Phone Number):

Jeff Brantley, City Manager (478-982-6100) John R. Thomas, Utilities Director (478-982-6100) Radio Dispatcher (Night: 478-982-2750)

# Summary of Water Quality Information

The **City of Millen** drinking water system is owned and operated by the **City of Millen**. The office address is 919 College Avenue, Millen, Georgia. If there are ever any comments or inquiries to be made, please feel free to contact **John R. Thomas** by phone at the number listed above.

Included in this report is information about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. The **City of Millen** is committed to providing your community with clean, safe, and reliable drinking water. For more information about your water or this report please call **Jeff Brantley** at the number listed above. **This Water Quality Report will not be mailed to individual consumers but is available at City Hall upon request.** 

Your water comes from four (4) community *groundwater* wells, identified as wells 101, 102, 103, and 104. The four wells, located within the **City of Millen**, derive water from the *Coastal Plain Aquifer*. Any necessary treatment of the water, such as the addition of disinfectants and/or removal of contaminants, is performed at the well sites. The properties are protected from activities which could potentially cause contamination of the water source.

A *Wellhead Protection Plan (WHPP)* has been completed for this facility by the Georgia Department of Natural Resources Environmental Protection Division (GA DNR EPD). This is a report which identifies any types of pollution to which your water supply could be vulnerable and includes information regarding potential sources of contamination. The **City of Millen** water system is considered to be in the average susceptibility range for pollution, however, there are no cited potential pollution sources for either well within the control zone (15-foot radius). For information on the management zones of these well sites, a copy of the *WHPP* for **this facility is available to the public at City Hall upon request.** 

The **City of Millen** water system is tested for more than eighty (80) drinking water parameters on a regular basis at a frequency determined by the GA DNR EPD Drinking Water Program and/or the United States Environmental Protection Agency. Sample/testing schedules are based on initial contaminant level assessments and can be changed if deemed necessary. Waivers may be issued for the analysis of any of the compounds mentioned if analytical data shows that the distributed drinking water in this area is not vulnerable to contamination from these chemicals.

Generally, samples are collected from within the **City of Millen** water system for the analysis of inorganic compounds (IOCs), volatile organic compounds (VOCs), synthetic organic compounds (SOCs), lead, and copper every three (3) years for all wells. Well 102 is tested for VOCs annually. Nitrate-nitrites, total trihalomethanes (TTHMs), and haloacetic acids (HAA5s) are analyzed yearly, and bacteriological content is monitored monthly. Radionuclide levels are tested every nine (9) years for all wells.

During 2024, the **City of Millen** water system was tested for bacteriological content, nitrate-nitrites, VOCs, IOCs, TTHMs, and HAA5s. We are pleased to inform you that the City of Millen had no violations of water quality standards during 2024. All detected contaminants are delineated in the accompanying charts. Any contaminants not listed had results less than the detection limits and/or MCLs.

For the 2022 lead and copper sampling event, water samples were taken from twenty (20) locations throughout your community. While <u>NO</u> samples exceed the *Actions Level* limits for copper, two (2) sample sites did exceed the *Action Level* limits for lead, and detectable levels of both metals were found in at least one additional sample. This may indicate the presence of this contaminant in some service lines or home plumbing. To access all individual lead tap sample results for **City of Millen** visit <u>www.gadrinkingwater.net</u>.

The Service Line Inventory (SLI) is a requirement under the Lead and Copper Rule Revisions (LCRR) to help water systems identify and replace lead service lines. It mandates that all public water systems develop and maintain an inventory of service line materials to assess the presence of lead and protect public health. The inventory will support proactive lead reduction efforts and ensure compliance with regulatory requirements to minimize lead exposure in drinking water. The City of Millen has submitted the required lead service line inventory. To view the complete SLI, please visit the following website: https://ga-epd.120water-ptd.com/.

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. The **City of Millen** is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home.

Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact the **City of Millen**. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <u>https://www.epa.gov/safewater/lead</u>.

#### Additionally, the following measures may be taken to minimize exposure to lead and/or copper:

- Use cold water for drinking or cooking.
- Do not cook with or consume water from the hot water faucet.
- Do not use hot water for making baby formula.
- Use only "lead-free" solder, fluxes and materials in new household plumbing and repairs.

Some people may be more vulnerable to contaminants in drinking water than the general population. Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily a cause for health concerns. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. **EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at 800-426-4791.** 

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells and may reasonably be expected to contain at least small amounts of some contaminants. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. The presence of contaminants does not necessarily indicate that water poses a health risk. In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water which must provide the same protection for public health. **More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline.** 

#### Contaminants that *may* be present in source water include the following:

- *Microbial contaminants*, i.e., viruses and bacteria from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, i.e., salts and metals, can be naturally occurring or result from urban storm runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides* may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, agricultural application, and septic systems.
- Radioactive contaminants, which can be naturally occurring or the result of oil/gas production and mining activities.

The **City of Millen** strives to maintain the highest standards of performance and quality possible. In order to maintain a safe and dependable water supply, improvements that benefit the community must be made. Please help keep these costs as low as possible by utilizing good water conservation practices.

### **DEFINITION OF TERMS AND ABBREVIATIONS USED IN THIS REPORT:**

<u>Maximum Residual Disinfectant Level (MRDL):</u> "The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbiological contaminants."

<u>Maximum Residual Disinfectant Level Goal (MRDLG):</u> "The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

<u>TTHMs (Total Trihalomethanes)</u>: One or more of the organic compounds Chloroform, Bromodichloromethane, Chlorodibromomethane, and/or Bromoform.

HAA5s (Haloacetic Acids): One or more of the organic compounds Monochloroacetic Acid, Dichloroacetic Acid, Trichloroacetic Acid, Monobromoacetic Acid, and Dibromoacetic Acid.

#### City of Millen 2024 Water Quality Data WSID: GA1650000

The table below lists all the drinking water contaminants that have been detected in your drinking water. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The data presented in this table is from testing done during the year noted. The Federal Environmental Protection Agency (EPA) and the Georgia Department of Natural Resources Environmental Protection Division (EPD) require monitoring for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. Parameters, values, and/or sources may vary.

				Detected Inorganic	Contaminants Ta	able		
		MCL		City of Millen	Range of	Sample	Violation	
Parameter	Units	[SMCL]	MCLG	Water System Results	Detections	Date	No/Yes	Typical Source of Contaminant
Chlorine	ppm	4	4	1.3	1.3 to 1.3	2024	No	Water additive used for control of microbes
luoride	ppm	4 [2]	4	1.1	0.69 to 1.1	2024	No	Erosion of natural deposits
Zinc	ppm	[5]	**	0.051	ND to 0.051	2024	No	Erosion of natural deposits
ron	ppb	[300]	**	85.0	ND to 85.0	2024	No	Erosion of natural deposits
Manganese	ppb	[50]	**	83.0	ND to 83.0	2024	No	Erosion of natural deposits
				Detected Organic	Contaminants Ta	ble		
				City of Millen	Range of	Sample	Violation	
Parameter	Units	MCL	MCLG	Water System Results	Detections	Date	No/Yes	Typical Source of Contaminant
laloacetic Acids	ppb	60	**	ND	ND	2024	No	By product of drinking water disinfection
THMs	ppb	80	**	4.2	4.2 to 4.2	2024	No	By product of drinking water disinfection
				Other Detected Unregu	ated Contaminan	ts Table		
		MCL		City of Millen	Range of	Sample	Violation	
Parameter	Units	[SMCL]	MCLG	Water System Results	Detections	Date	No/Yes	Typical Source of Contaminant
Sodium	ppm	**	**	26.0	6.3 to 26.0	2024	No	Erosion of natural deposits
				Lead And Copper	Monitoring Resu	lts		
		Action		City of Millen	Range of	Sample	Violation	
Parameter	Units	Level	MCLG	90th Percentile	Detections	Date	No/Yes	Typical Source of Contaminant
ead	ppb	15	0	5.4	ND to 77.0	2022	No	Corrosion of household plumbing
opper	ppm	1.3	1.3	0.29	0.028 to 0.430	2022	No	Corrosion of household plumbing
				Microbiological	Monitoring Result	ts		
				City of Millen	Positive Sample	Sample	Violation	
Parameter	Units	MCL	MCLG	No. of Positive Samples	Date (Month)	Year	No/Yes	Typical Source of Contaminant
otal Coliform	Present/	1*	**	0	N/A	2024	No	Naturally present in the environment
.coli	Absent	0	0	0	N/A	2024	No	Human and animal fecal waste
				Radionuc	lides Table			
				City of Millen	Range of	Sample	Violation	
Parameter	Units	MCL	MCLG	Water System Results	Detections	Date	No/Yes	Typical Source of Contaminant
Ipha emitters	pCi/L	15	0	ND	N/A	2021	No	Erosion of natural deposits
Combined radium 226/228	pCi/L	5	0	ND	N/A	2021	No	Erosion of natural deposits

\*Total Coliform Rule MCL= 1 positive sample for systems that collect <40 samples a month \*\* No established MCL, SMCL or MCLG

•N/A: Not applicable to this contaminant •ppb (ug/L): parts per billion or micrograms per liter •ppm (mg/L): parts per million or milligrams per liter •pCi/l: picocuries per liter, a measurement of radiation •ND (Not Detected): By regulation, this substance or group of substances was tested for in our finished tap water; however, none was detected at the testing limit.

•Action Level (AL): "The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow."

•Maximum Contaminant Level (MCL): "The highest level of a contaminant that is allowed in drinking water. MCL's are set as close to the MCLG as feasible using the best available treatment technology." •Maximum Contaminant Level Goal (MCLG): "The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLG's allow for a margin of safety."

•Secondary Maximum Contaminant Level (SMCL): Reasonable goals for drinking water quality. Exceeding SMCL's may adversely affect odor or appearance, but there is no known risk to human health.
